

UX Research Analytics

UXP4401 | USER EXPERIENCE BACHELORS OF
SCIENCE

In the UX Research Analytics Course students will learn best practices for analyzing user experience research data and making data-driven design recommendations.

UX RESEARCH ANALYTICS

UXP4401 | USER EXPERIENCE BACHELORS OF SCIENCE

Building upon the research aspects of previous courses, UX Research Analytics students will explore the visualization of collected data.

COURSE OUTCOMES

Analyze data-collection methods used in a UX case study

Utilize industry-standard tools to visualize data

Present data-driven design recommendations in written and verbal formats

COURSE OUTCOMES

COURSE MATERIALS

- ▶ Laptop
- ▶ Microsoft Excel
- ▶ Tableau Public
- ▶ Figma
- ▶ Linked-in Learning
- ▶ O'Reilly Books Online

UX RESEARCH ANALYTICS

SKILLS DEVELOPMENT

ACADEMICS

UX Research Analytics prepares students for future courses user experience and design by introducing industry tools to visualize data to draw conclusions and make design-driven recommendations.

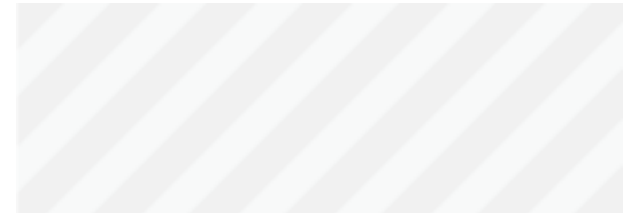

CAREER

UX Research Analytics assignments are designed to develop students written and verbal communication skills as they practice presenting their findings, making recommendations, and collaborating with peers.

PORTFOLIO

UX Research Analytics prepares students for success in **Project and Portfolio V: User Experience** where students will learn how UX fundamentals can be applied to support a positive cause.

UX RESEARCH ANALYTICS

WEEK ONE

This week students will visualize data using Tableau Public to analyze user test comparing two versions of a web app interface (Interface A and Interface B). The goal is to uncover which design delivers a better overall experience, looking at task success rates, completion times, and satisfaction ratings.

WEEK THREE

Students will visualize data with Excel and conduct statistical hypothesis tests as part of a competitive analysis of VR headsets.

WEEK TWO

Students visualize web traffic for the Google Marketplace Store using Google Analytics.

WEEK FOUR

During the final week, students will focus on qualitative data analysis and use Figma to visualize customer reviews from Starbucks. They will practice making recommendations to improve user experience based on the results of an empathy map and persona.

OUT-OF-CLASS WORK

This course requires at least 40 hours of preparation and out-of-class work. Out-of-class activities are documented in this syllabus and include reading assignments, tutorials, skills practice, and homework. Consideration has been given to creating out-of-class work that will support students’ efforts to successfully complete this course while achieving course objectives and program learning outcomes.
